Upcoming Meetings – SAVE THE DATE

December 18, 2013 — No Meeting; Happy Holidays!

January 15, 2014 — **"Professional Liability, Yesterday and Today — Claims, Risk Management and the Current Economy"** presented by David Coduto, Terra Insurance.

End The Internal Competition Today For Greater Success Tomorrow

By: Mark Eaton, Former NBA Player

Mark Eaton

The difference between a group and a team. In the NBA, when a player on a basketball team is playing for himself rather than the team as a whole, failure is eminent. In business, when a key player in the company has an “I” mentality, it’s only a matter of time until failure creeps into the organization.

In any group endeavor, success is not about discipline—it’s about teamwork. Without teamwork, people don’t cooperate, collaborate, or innovate.

Unfortunately, corporate America has created a great deal of confusion around the concept of teamwork and how to create a team. Professional basketball teams are not confused. They know what they have to do and they do it. Now it’s time for businesses to do the same. [Click here](#) for the full article.

Safety First

Preventing The Flu

"Courtesy of the Centers For Disease Control"

Good health habits like covering your cough and washing your hands often can help stop the spread of germs and prevent respiratory illnesses like the flu. There also are flu antiviral drugs that can be used to treat and prevent the flu.

1. Avoid close contact.

Avoid close contact with people who are sick. When you are sick, keep your distance from others to protect them from getting sick too.

2. Stay home when you are sick.

If possible, stay home from work, school, and errands when you are sick. You will help prevent others from catching your illness.

3. Cover your mouth and nose.

Cover your mouth and nose with a tissue when coughing or sneezing. It may prevent those around you from getting sick.

4. Clean your hands.

Washing your hands often will help protect you from germs. If soap and water are not available, use an alcohol-based hand rub.

5. Avoid touching your eyes, nose or mouth.

Germs are often spread when a person touches something that is contaminated with germs and then touches his or her eyes, nose, or mouth.

6. Practice other good health habits.

Clean and disinfect frequently touched surfaces at home, work or school, especially when someone is ill. Get plenty of sleep, be physically active, manage your stress, drink plenty of fluids, and eat nutritious food.
